PEPTIDEDOSAGE

# EGF Dosage Chart

Medically reviewed June 21, 2026 · Page updated November 21, 2026

TYPICAL RESEARCH DOSE

## 75 mcg per dose, 3×/week intralesional (25 mcg for smaller lesions); topical 10-50 mcg/mL

### 1 mg vial + 2 mL bacteriostatic water

| PHASE | DOSE PER INJECTION | UNITS (PER INJECTION) |
|---|---|---|
| Smaller / superficial lesions (lower-dose protocol) | 25 mcg | 5 units (0.05 mL) |
| Standard advanced diabetic foot ulcer dose | 75 mcg | 15 units (0.15 mL) |
| Maintenance, 3×/week until wound closure | 75 mcg | 15 units (0.15 mL) |

STORAGE

Lyophilized powder refrigerated at 2-8 °C, or frozen at -20 °C for long-term storage, protected from light. Because EGF is heat- and protease-labile, the reconstituted solution should be kept refrigerated at 2-8 °C and used within a short window (hours to a few days); avoid repeated freeze-thaw cycles and vigorous agitation.

Educational reference only, not medical advice. Figures restate the research protocol published at the address above.
